

# Cybersecurity Consultant, IAM

## Job Description

### **Role Summary:**

IAM Consultant is a customer-facing consultant responsible for maintaining a high-quality experience and managing the delivery of multiple IAM implementation engagements concurrently. IAM Consultant is expected to be a subject matter expert in the implementation of complex IAM implementations (including integration with common endpoints) and is expected to have experience in Identity Governance and Administration.

IAM Consultant will provide subject matter expertise during consulting engagements, in which we assess clients' security capabilities in the policy, process, technology or organizational areas. IAM Consultant also identifies gaps and recommends cost-effective best practices to manage client risk, and increase their understanding of security, privacy, risk and compliance.

### **Responsibilities:**

- The provision and delivery of security consulting services in accordance with CyberTech's methodologies.
  - Leading or participating within the Identity practice
  - Travelling to customer sites;
  - Collecting business and functional requirements in IAM area at our clients
  - Designing and construction of processes related to IAM from the business side (ie. Management of the identity lifecycle, requesting access, the audit of entitlements);
  - Creation of draft reports and presentations;
  - Assisting in the presentation of findings to the customer
- Work in a collaborative team analyzing client issues and developing solutions
- Designing and implementation of a methodology/approach to role-based access management

- Planning and supporting clients in the business implementation of prepared changes
- Prioritize objectives and contribute to project planning and status reporting
- Understand existing client processes and controls with respect to electronic and non-electronic information security.
- Providing pre-sales assistance as required:
  - Meeting with clients to determine requirements;
  - Working with clients to define the scope of a project.
  - Other duties as assigned.
- Typical tasks involve:
  - Carrying out research and data collection to understand the organization;
  - Conducting analysis;
  - Identifying issues and forming hypotheses and solutions;
  - Interviewing the client's employees, management team and other stakeholders;
  - Facilitating workshops as required;
  - Presenting findings and recommendations to clients;
  - Preparing business proposals and presentations.

**Desired Skills and Experience:**

- 2 to 3 years of experience in actual work and application of skills in a security consulting environment
- General knowledge and experience in the application of governance and compliance control requirements and the provision of service offerings.
- Development experience in SailPoint IdentityIQ (IIQ) and/or IdentityNow
- Additional experience in:
  - Software Assessment, Design, Development and Implementation
  - System Integration Testing, Unit Testing, Postproduction Support
  - Design/Implementation of Lifecycle and compliance processes
  - Working with AD/LDAP and databases
  - Java, BeanShell/JavaScript, XML, SQL development
  - Working with SOAP and REST
